

Jets clustered in the colour rest frame with an angular algorithm, then labelled by their energy in that frame. Every line is flat: across a factor of ten in lab transverse momentum no slice varies by more than 12%. This is the frame that organises fragmentation.

Pythia 8 NC DIS, 10×100 GeV, angular anti- k_T $R = 0.4$ in the $\gamma^* p$ frame, $E_{\text{cm}} > 1$ GeV, current hemisphere
