

Same lab-frame jet momentum, different colour rest frames. The colour-connected system in DIS has invariant mass W and moves with rapidity y_{cm} that falls with W ; at fixed $|\vec{p}|_{\text{lab}}$ a jet from a higher- W event is harder in that frame and fragments into more particles.

Pythia 8 NC DIS, 10×100 GeV, anti- k_T $R = 0.4$, $p_T^{\text{lab}} > 2$ GeV, $|\eta| < 3.5$, Breit current hemisphere
