

● $Q = 2.2\text{--}3.3$ GeV ■ $3.3\text{--}5$ ▲ $5\text{--}7.5$

Jets clustered in the colour rest frame with n_{90} computed from their lab momenta, in cells of fixed jet energy in that frame and fixed Q , across the three beam configurations: median slope $+0.00$, against $+0.03$ for the inclusive curve (grey).
