

●  $Q = 2.2\text{--}3.3$  GeV    ■  $3.3\text{--}5$     ▲  $5\text{--}7.5$

Jets clustered in the colour rest frame with  $n_{90}$  computed from their lab momenta, in cells of fixed jet energy in that frame and fixed  $Q$ , across the three beam configurations: median slope  $+0.00$ , against  $+0.03$  for the inclusive curve (grey).
